

LASH LINE AND MEDIUM EYELINER

keeping your eyes on point

I HOPE YOU LOVE YOUR NEW EYELINER!

Please note that it is your responsibility to follow the aftercare instructions. Failure to follow the advice will result in less than desired results.

For 5 days following your procedure you **MUST NOT**:

- ✦ Get your eyeliner wet.
- ✦ Use mascara, eyeliner or eyeshadow.
- ✦ Use sun beds, saunas, attend yoga, gyms, hot steaming baths, showers or anything that will cause sweating.
- ✦ Touch or pick at the area as this can result in pigment loss.
- ✦ Use creams or retinol based products around your eyes.

AFTERCARE PROCEDURE

- ✦ wash your hands thoroughly before performing aftercare
- ✦ with a cottonbud or clean fingertip apply a thin layer of aftercare balm to the treated area
- ✦ repeat 1-2 times per day or any time the area feels tight or itchy
- ✦ keep moisturised for the first **2-3 days** to allow your eyeliner to heal well.

PLEASE NOTE: Any lash growth serums will affect the duration of the eyeliner and it is recommended not to use them.

After your treatment it is perfectly normal to expect some or all of the following symptoms:

Swelling, puffiness, tenderness, itchy and a feeling of scratchy and tired eyes.

SPMU is a two-stage treatment with lots of ups and downs. Your eyeliner will look darker immediately after your treatment.

The colour may fade dramatically with the skin often appearing milky and uneven. The colour will begin to resurface in approximately 2-3 weeks time.

Don't worry, this is all completely normal and why your top-up is required.

Trust in the process!
